

# The Credible alternative to Liposuction creating INCH-LOSS BODY CONTOURING and FACE & BODY SKIN TIGHTENING – All in one system

## Amazing New Treatment

### The intelligent alternative to Liposuction

Non-surgical inch-loss, body contouring and skin tightening for face and body areas

Radio Frequency Face & Neck  
Tissue Retraction  
Collagen Formation  
Ultrasound to reduce Fat cells  
Cellulite Treatment

## This amazing NEW Lipo treatment which combines Bipolar, Monopolar Radiofrequency and Cavitation

### Radiofrequency

Sagging skin on the neck, décolleté and face along with wrinkles are common problems associated with ageing. This is mainly due to decreasing of collagen production as skin loses its quality.

**Radiofrequency (RF)** system is the most commonly used procedure to stimulate the collagen production and strengthen the skin structure. (RF) enables skin tightening and improvement of the skin's appearance painlessly without post-op downtime of classic surgery applications or other invasive methods.

**Radiofrequency** is a non-invasive way of tightening loose or lax skin it is used for body tightening and skin improvement. Radiofrequency treatment uses electrical pulses which heats the dermis (the deepest skin layer) through hand pieces without damaging the epidermis (the top layers of the skin), to stimulate new collagen growth and provide an improvement in skin elasticity and appearance, to remodel and enhance dermal density with minimal risks.

### Tissue Retraction

The generated heat causes local contraction of the collagen fibres immediately tightening the skin to remodel and re-juvenate the effects of aging.

### Collagen Formation

The local fibroblasts stimulate the collagen formation by heating the dermis and it then acts as a new deep foundation for the skin. This produces further delayed tightening, which only becomes evident slowly over the next few months.

### Improved Circulation

Radiofrequency also improves blood flow and lymphatic drainage and provides a better oxygen supply and greater toxin clearance.

### Ultrasound Cavitation

The ultrasonic cavitation, also known as aesthetic cavitation, is a relatively new technique that applies a Phenomenon known in physics to aesthetics. This phenomenon is called cavitation and is a very smart way to reduce fat, because it is converted into liquid and then is naturally eliminated with urine. Nowadays the ultrasonic cavitation is considered as a treatment alternative to surgical liposuction as a non-invasive procedure with results obtained in the short term.

**The ultrasonic cavitation reduces fat cells** with certain manipulation techniques, thanks to a hand piece that is placed on the skin precisely on the area that is to be treated. The machine works with ultrasounds that form bubbles in the tissues where the fat cells are located. The bubbles expand and are immediately compressed afterwards. The temperature increases due to sudden variation in pressure and the bubble implodes. This implosion damages the fat cells, reducing the localised adiposity.

The fat contained (triglycerides) fragments into diglycerides that are expelled via the urinary system. When cavitation is followed by a lymphatic drainage treatment, the process is faster, as the drainage is very effective eliminating liquids. The low-frequency ultrasonic waves are useful in combating fat accumulations. It produces lipolysis of fatty acids from adipocytes (fat-laden cells) due to a phenomenon known as stable cavitation, and increased cell permeability of the adipocytes. Furthermore, there is a breakdown of the fibres through mechanical action. As a result, some content of adipocytes is eliminated by the metabolism.

This system works with four different operative modes which can be adjusted according to the imperfection to be treated; it is the only cavitation device in the aesthetic market that utilises the so-called "adaptive" mode, which is an emission mode that automatically adjusts frequency emission relative to the tissue characteristics this is undoubtedly considered as an outstanding effect which boosts treatment efficacy.

### Radiofrequency Face & Neck Treatments

Sagging skin on the neck, décolleté and face along with wrinkles are common problems associated with aging.

This is mainly due to decreasing of collagen production as skin loses its quality. Radiofrequency (RF) system is the most commonly used procedure to stimulate the collagen production and strengthen the skin structure. RF enables skin tightening and improvement of the skin's appearance painlessly without post-op downtime of classic surgery applications or other invasive methods.

Radiofrequency is a non-invasive way of tightening loose or lax skin around the forehead, eyes, cheeks, mouth, jaw line, jowls and also the area under the chin/neck. This is a great way of reducing fine lines and wrinkles, enlarged pores and improving skin tone and texture as well as dull skin. It can also be used for body tightening and skin improvement.

Radiofrequency treatment uses electrical pulses. It heats the dermis (the deepest skin layer) through hand pieces without damaging the epidermis (the top layers of the skin), to stimulate new collagen growth and provide an improvement in skin laxity and appearance, to remodel and enhance dermal density.

**Tissue Retraction:** The generated heat causes local contraction of the collagen fibres immediately tightening the skin to remodel and re-juvenate the previous effects of aging.

**Collagen Formation:** The local fibroblasts stimulate the collagen Formation by heating the dermis and it then acts as a new deep foundation for the skin. This produces further delayed tightening, which only becomes evident slowly over the next few months.

**Improved Circulation:** Radiofrequency also improves blood flow and lymphatic drainage and provides a better oxygen supply and greater toxin clearance. The results are a smoother younger looking skin.

Slimming systems in your clinic/salon make on average  
Between (Small towns) - £200 per day = £1,000 per week  
£5,000 per month  
(Medium towns) £400 per day = £2,000 per week  
£10,000 per month  
Larger towns/or cities £800 per day = £4,000 per week -  
£16,000 per month  
Or more (based on a 5 day week)

The 'Academy of Beauty Training' was set up to offer salons and clinics both specialist training and/or systems. We have proved such a success because of the theoretical and practical training offered on our range of laser and other specialist treatments and because we understand the concerns, dreams and aspirations of proprietors of salons and clinics.

Also the unleashing of your full earning potential by offering these specialist treatments to your clients past, present and future will make your salon stand out from the crowd. You can turn your business into the success story you have always dreamed of.

Our specialist training also includes laser and IPL courses delivered by lecturers who are friendly and courteous. All our specialist courses are designed to be learner centred, exciting and innovative and guarantee you an exceptionally high standard of training, enabling you to gain the confidence needed to perform these specialist treatments within your clinic/salon.

Only by doing this will you achieve the high standard of skills necessary to offer a professional service to your clients with complete confidence. This will set you above the rest of the competition in your area. Call today for more information 01623 477206.

The Academy of Beauty Training delivers what we believe to be the PREMIER training in the UK and Ireland & Europe. The delivery of all our courses is carried out to a very high standard by highly qualified lecturers.

All of our 30 training courses are accredited and recognised by leading industry Insurance Companies and your Academy of Beauty Training Certificates are awarded on successful completion of your course which will enable you to gain insurance and to commence work legally in the public sector.

We supply all relevant consultation and aftercare leaflets for all courses. Also: Laser and IPL specialist documentation supplied for all training courses.
